

Exiequielle John Frias

AI-Native Frontend Engineer | Vue, Nuxt, TypeScript

Manila, Philippines | frias.exiequiellejohn@gmail.com | xcworks.vercel.app | linkedin.com/in/exiequielle-john | github.com/jagwaw

SUMMARY

Frontend developer with 8+ years shipping production web apps. At BillEase, a Philippine fintech, I build KYC, payments, and credit products in Vue/Nuxt and TypeScript: I replaced a biometric vendor with an in-house liveness pipeline, led the frontend of a new credit line product, and drove a Figma-driven design-token migration. I build with Claude Code, Cursor, and MCP every day, and I'm comfortable in Python APIs when a feature spans the stack.

SKILLS

Frontend: Vue.js (2 & 3), Nuxt.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, SCSS, Vuex, Vue Router, Vuetify, Firebase, WebSocket, React, responsive design

AI-assisted dev: Claude Code, Cursor, MCP (Figma, ClickUp), spec-driven agentic workflows

Web performance: Technical SEO, Core Web Vitals, Google Analytics, Dynatrace, A/B testing

Backend: Python, Django REST Framework, FastAPI, Flask, PostgreSQL, REST APIs

Practices & tools: Unit testing (Vitest), code review, Agile/Scrum, CI/CD (GitLab CI), Git, Docker, AWS, Figma, Postman, JIRA

WORK EXPERIENCE

Software Engineer | BillEase

Feb 2024 - Present

Consumer lending and payments app for a Philippine fintech. Nuxt, Vue, TypeScript, Vuex, Tailwind, Python.

- Core contributor to the consumer lending web app: 3,400+ commits across KYC onboarding, payments, and credit products.
- Replaced a third-party biometric liveness vendor with an in-house detection pipeline (face detection, pose gating, remotely tunable thresholds), removing a per-verification vendor cost.
- Led the frontend build of a new Credit Line product: activation, funding-source selection, OTP-gated payments, statements, and deep-link entry points across four purchase flows.
- Redesigned Account Recovery end to end, adding invisible bot protection with a fallback challenge and security telemetry.
- Drove the migration from an ad-hoc color palette to a Figma-driven design-token system (TypeScript -> CSS variables -> Tailwind), ending years of style drift.
- Owned the design refresh across payments, notifications, e-wallet, auto-renew, and Pay Now.
- Built client-side image compression for KYC uploads so large phone photos no longer fail, with a legibility floor that keeps documents readable for reviewers.
- Introduced the team's change-spec practice (proposal, task checklist, and implementation record per feature), now the standard for new work.

Frontend Developer | Penbrothers (Client: Gamesys / Bally's)

Oct 2021 - Jan 2024

Customer-facing websites for a global online gaming company, with European and US teams.

- Built and maintained responsive, mobile-first interfaces for high-traffic gaming sites.
- Owned technical SEO: fixed site speed, mobile responsiveness, and crawlability issues, and reported SEO performance to the team.
- Set up Google Analytics and Dynatrace, built KPI dashboards, and shipped fixes for bottlenecks found in real-user data.
- Analyzed A/B test results to recommend improvements; wrote unit tests and took part in code reviews across time zones.

Python Developer | NarraSoft (Client: Panoply.io)

May 2021 - Oct 2021

Cloud data warehouse platform.

- Fixed bugs and improved existing features across the platform's Python codebase.
- Debugged and maintained data source integrations pulling from third-party providers.

Junior Full-Stack Developer | Remote Staff

Jul 2018 - May 2021

Internal products for a remote staffing company, working directly with the business team and Australian clients.

- Built Remote Classroom end to end: a pandemic-era platform for schools with student activity tracking, screen capture, time tracking, and task management.
- Designed and built its REST APIs in Flask with PostgreSQL and SQLAlchemy.
- Migrated a legacy Python 2.7 API to Python 3.7, rebuilding it on FastAPI.
- Rebuilt the client-facing candidate page (v2) and built the company's pricing page.

EDUCATION & CERTIFICATIONS

Bachelor of Science in Information Technology | Lyceum of the Philippines University - Manila | 2014 - 2018

LinkedIn Learning: React.js Essential Training; React.js: Building an Interface
